The Fourth Grade Grocer

Word Problems

Solve the following problems.

Show your work.

1. The grocer bought canned goods for \$1,765 and sold them for \$2,680. How much profit did the grocer make?

$$\begin{array}{r}
 1.) \quad \$2,680.00 \\
 \quad -\$1,765.00 \\
 \hline
 \quad \quad \quad \mathbf{\$915.00}
 \end{array}$$

The grocer made a profit of **\$915.00**.

2. The grocer bought two hundred three pounds of cheese at one dollar and ninety-nine cents a pound. How much did he spend on cheese?

$$\begin{array}{r}
 2.) \quad 203 \times \$1.99 = \\
 \quad \quad \quad \mathbf{\$403.97}
 \end{array}$$

The grocer spent **\$403.97** on cheese.

3. The grocer sold 23 bushels of apples for \$3.25 per bushel. How much money did he receive for the apples?

$$\begin{array}{r}
 3.) \quad \$3.25 \times 23 = \\
 \quad \quad \quad \mathbf{\$74.75}
 \end{array}$$

The grocer received **\$74.75** for the apples.

4. At seventy-five cents a pint, how much will two hundred twenty-six pints of strawberries cost?

$$\begin{array}{r}
 4.) \quad 226 \times \$.75 = \\
 \quad \quad \quad \mathbf{\$169.50}
 \end{array}$$

Two hundred twenty-six pints of strawberries will cost **\$169.50**.

5. The grocer paid each of his six employees \$94.67. How much money altogether did the grocer pay out to his employees?

$$\begin{array}{r}
 5.) \quad \$94.67 \times 6 = \\
 \quad \quad \quad \mathbf{\$568.02}
 \end{array}$$

The grocer paid **\$568.02** to his employees.

6. The grocer buys milk from the dairy for .99¢ per gallon. If he buys two hundred gallons of milk from the dairy and sells it for \$2.49 per gallon, how much profit will the grocer make?

$$\begin{array}{r}
 6.) \quad .99 \times 200 = \\
 \quad \quad \quad \$198.00 \\
 200 \times \$2.49 = \$498.00 \\
 \$498.00 - 198.00 = \\
 \quad \quad \quad \mathbf{\$300.00}
 \end{array}$$

The grocer will make **\$300.00** profit.
