

**Who built the first computer?
What was it like?
Try to match these names
with the correct machine!**

Intel

Bill Gates

**ENIAC
Electronic Numerical
Indicator and Computer**

Colossus

Charles Babbage

This machine was built by Dr Flowers and was used to decipher the German 'Enigma' code during the Second World War.

This company produced the first commercial microprocessor called the 8080 and was the forerunner of the Pentium.

In 1945 America developed this huge room-sized computer, the first general-purpose computer.

The person who changed the course of the history of computers by starting the company 'Microsoft'.

This person designed a machine called the 'analytical engine', technically the first computer although it was never actually built.

A Historical Timeline

Put the correct dates on the line.
See www.maxmon.com/history.htm
or www.computerhistory.org to help you

1830	Charles Babbage's Analytical Engine
1878
1900	John Ambrose Fleming Invents vacuum tube
1937	Stibitz's complex number calculator
1940	First example of remote computing
1943	ENIAC built in USA
1945
1948-51	First commercial computer - UNIVAC
1958
1963	MIT's LINC computer
1971	First microprocessor The 4004
1975	Bill Gates/Paul Allen began Microsoft
1976	APPLE Microcomputer came out
1981
1984	Apple Macintosh introduced
1990	Microsoft Word released with Windows 3
1990's	Virtual Reality systems developed
1993
1990's	World Wide Web started a computer boom

Now add these events to the timeline!

First IBM PC	First computer bug
Intel Pentium processor introduced	
First shift key typewriter	First integrated circuit
